

STEP THREE - WHEELING OUR TEN NUMBERS

Enclosed with this system are three different wheeling systems. These systems allow you to convert your twelve new numbers into ready-to-play Pick-6 Lotto combinations with varying degrees of coverage. Our first wheel is a 12 number wheel for 4 out of 6 coverage with 6 combinations to play. Our second wheel is a 12 number wheel which gives you both 4 out of 5 coverage as well as 5 out of 6 coverage with 42 combinations. Our third wheel is a 12 number wheel for 5 out of 5 coverage with 132 combinations. Be sure to make photocopies of these blank wheeling systems before using them.

For our example we will fill in the twelve numbers from the previous page into our 4 out of 6 coverage wheel. This will give us six Pick-6 Lotto combinations to play in our next drawing.

37	25	12	27	38	2	32	42	39	24	36	10

We begin by copying our twelve numbers, in the exact order that they were listed on our REDUCER BOX, into the twelve spaces across the top of our wheeling system. This step is illustrated on the left.

The next step is to copy the number we placed at the top of each column into all of the blank spaces in that column. In our example, we filled the number 37 into the space on top of the first column, and then we copied this number into every blank space below it. We then did the same thing for the remaining eleven numbers until all of the blank spaces in the chart are filled in.

37	25	12	27	38	2	32	42	39	24	36	10
37	25		27	38	2					36	
37		12	27	38			42	39			
37			27	38		32			24		10
	25	12			2		42	39		36	
	25				2	32			24	36	10
		12				32	42	39	24		10

Once the chart is filled in, you are ready to transfer the 6 combinations onto your actual betslips. Our first combination will be listed in the second row of the wheel (*the first row with black boxes*). The six numbers on this line are 37-25-27-38-2-36. This is the first combination to play. The next row gives us the numbers 37-12-27-38-42-39, and so on. The last row on the chart gives us the combination 12-32-42-39-24-10.

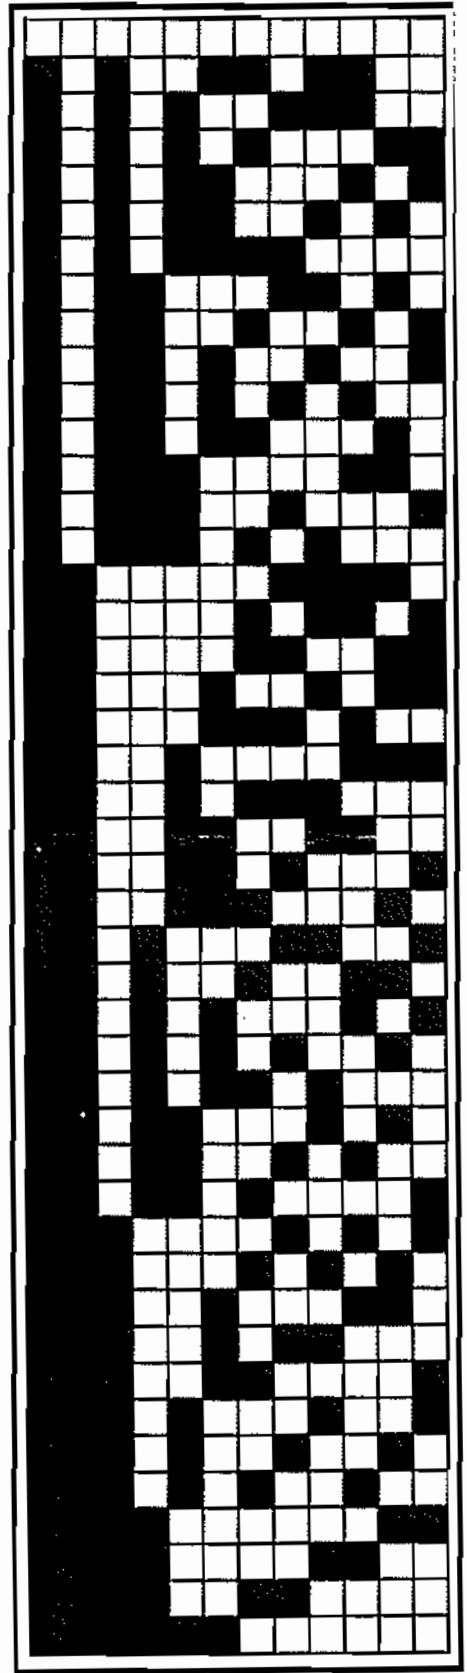

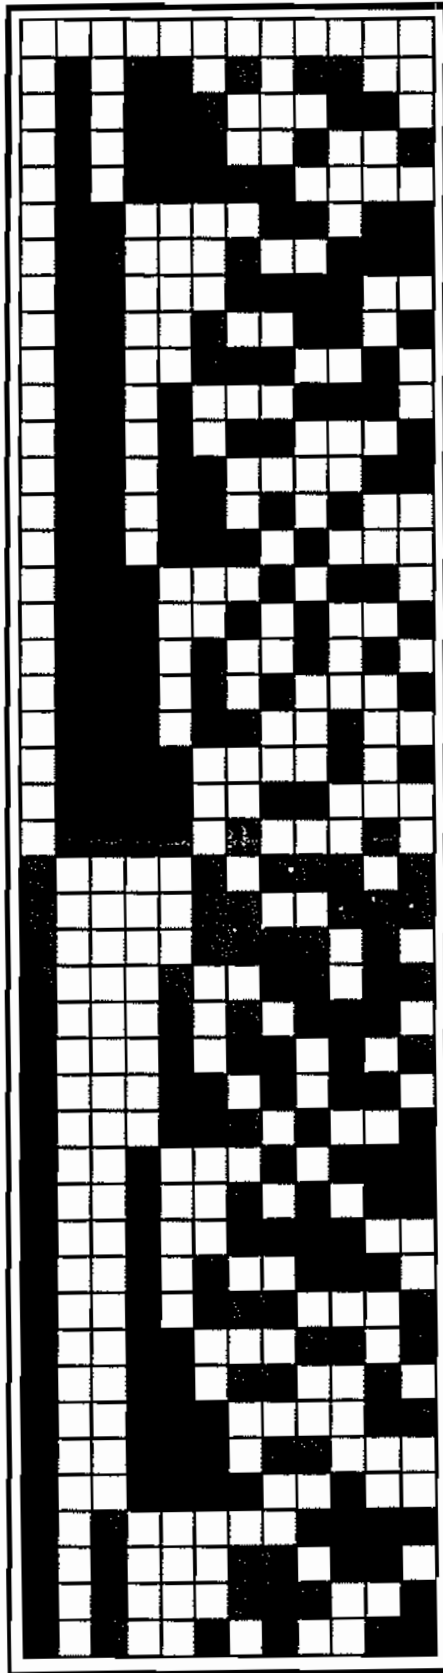

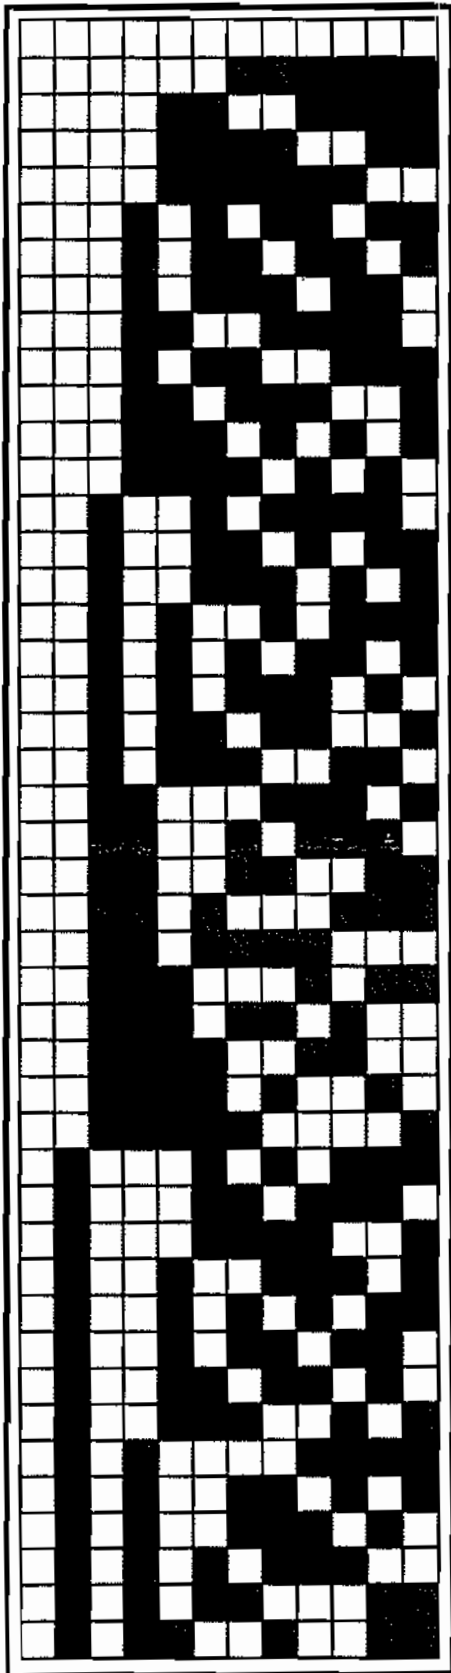

Since this is an economical 4 out of 6 coverage wheel, if all six of the numbers drawn are within your group of twelve selected numbers, then you are assured that at least one of our 6 tickets will have a four number winner on it. We could actually have several winning tickets, however, one winning ticket is the minimum guarantee. You could also have a five number or six number (JACKPOT) winning ticket with this system. Even if only four or five of the winning numbers drawn are contained within your group of twelve selected numbers, you could still end up with one or more winning tickets, however, while this is likely it is not guaranteed.

The 4 out of 5 / 5 out of 6 multi-coverage wheel assures us that if all six of the winning numbers drawn are contained in our twelve selected numbers, we will have at least one ticket with five numbers right (second prize). To broaden our coverage, this wheel also guarantees
